

Hay PID Policy 3 – Replacement, Upgrade and Decommissioning of Irrigation Outlets

Replacement of Upgrade of Outlets:

A member/customer must apply in writing to the Hay PID Board, outlining the location and size of the outlet/structure needing to be installed or upgraded. This correspondence will be tabled at the earliest possible Board meeting and the Board will vote on whether to approve or disapprove the new or upgrade of this outlet/structure. The Board's decision is final.

If approved, all costs in relation to the outlet/structure must be met by the applicant. All work in relation to this will be carried out by Hay PID staff or by subcontractors appointed by the Hay PID.

The applicant will be notified in writing of status of their application.

Decommissioning of Outlets:

A customer may apply in writing to the Hay PID Board to decommission an outlet from the PID irrigation pipeline. The PID will charge a fee to remove the outlet and reinstate the integrity of the pipeline. If it is the last of the customer's outlets to be decommissioned and the customer wishes to disconnect from the Hay PID delivery system permanently, a decommissioning fee will be charged.

All fees and charges relating to outlets are published in the PID Schedule of Fees and Charges on the PID website.
